```
This sequence was generated from part of bacterial clone contigs of human chromosome 6, constructed by the Sanger Centre Chromosome 6 human chromosome 6, constructed by the Sanger Centre Chromosome 6 human chromosome 6, constructed by the Sanger Centre Chromosome 6 human chromosome 6, constructed by the Sanger Centre Chromosome 6 http://www.sanger.ac.ux/HGP/Chr6

During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations stogether with a note of the overlapping clone name. Note that the vortistion amountation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:

En., EMBL; Sw., SMISSPROT; Tr., TREMBL; Wp., WORMPEP, Information on the WORMPEP database can be found at the Constructed at the Roswell Park Cancer Institute by the group of Pater de Jong. For further details see http://bacpac.med.buffalo.edu/

VECTOR: PCTOR: pCTPAC2

IMPORTANT: This sequence is not the entire insert of clone Re4-570R3 It may be shorter because we only sequence overlapping sections once, or longer because we arrange for a small overlap between neithbouring submissions.

The true left end of clone ICRFGc-CR07210 is at 1652 in this sequence. The true right end of clone ICRFGc-CR07210 is at 50826 in this sequence. The true left end of clone ICRFGc-CR07210 is at 50826 in this sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Submitted (17-DEC-1999) Sanger Centre, Hinxton, Cambridgeshire, CB10 1SA, UK. E-mail enquiries: humquery@sanger.ac.uk Clone requests: clonerequest@sanger.ac.uk clone captests: clonerequest@sanger.ac.uk clone cot 4, 1999 this sequence version replaced gi:5870478. This sequence has been finished according to sequence mup criteria as follows. An attempt is made to resolve all sequenciny problems, such as compressions and repeats, but not necessarily within known annotated human repeat sequence elements (e.g. Alu). Where the sequence is ambiguous, there is an annotation using the 'unsure'
                                                                                                                                                                                                                                                                                                                                                                                                                   HSDJ570F3 94770 bp DNA PRI 17-DEC-1999 HMMan DNA sequence from clone RP4-570F3 on chromosome 6 contains a gene similar to Rattus norvegicus synaptic ras GTPass-activating protein p135, the CICK0721Q.5 (polypeptide from patented cDNA protein p135, the PHF1 (PHD finger protein 1) gene, the RNSL2 (kinesin-like 2) gene, the gene for acyl-protein thioesterase, ESTS, STSS, GSSs and a CpG Island, complete sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalidia; Eutheria; Primates; Catarrhini; Hominidae; Homo.

It currently consists of 3 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         others

It currently consists of 24 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

Caboratory, MS 64-121, Berkeley, CA 94720, USA

On Feb 11, 2000 this sequence version replaced gi:6838825.

On Feb 12, 2000 this sequence version replaced gi:6838825.

For further information about this sequence, including its location and relationship to other sequences, please visit our sequence archive Web site (http://www.fruitfly.org/sequence/) or send email to bdgp@fruitfly.berkeley.edu. All contigs in this submission meet the following cutoffs: length >= 200 bases.

* NOTE: This is a 'working draft' sequence. It currently consists of 142 contigs. The true order of the pieces

* is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown.

* This record will be updated with the finished sequence

* as soon as it is available and the accession number will

* be preserved.
                                                                                   Eukaryota: Metazoa; Arthropoda; Tracheata; Hexapoda; Insecta; Pterygota: Metazoa; Arthropoda; Tracheata; Hexapoda; Insecta; Pterygota: Neoptera; Endopterygota; Diptera; Brachycera; Muscomorpha; Ephadoridea; Drosophilae; Drosophila.

Submitted (21-0CT-1999) Drosophila Genome Center, Lawrence Berkeley, Submitted (21-0CT-1999) Drosophila Genome Center, Lawrence Berkeley, Laboratory, MS 64-121, Berkeley, CA 94720, USA
ON Nov 16, 1999 this sequence version replaced gi:6425635.
For further information about this sequence, including its location and relationship to other sequences, please visit our sequence archive Meb site (http://www.fruitfly.org/sequence/) or send email to bdgp@fruitfly.berkeley.edu. All contigs in this submission meet the following cutoffs: length >= 200 bases.
**NOTE: This is a "working draft' sequence. It currently consists of 142 contigs. The pleases is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as * runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finlished sequence * as soon as it is available and the accession number will
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Eukaryota: Metacaa: Arthropoda; Tracheata; Hexapoda; Insecta; Pterygota: Metacaa; Arthropoda; Tracheata; Brachycera; Pterygota: Neoptera: Endopterygota: Diotera; Brachycera; Muscomorphia: Endopterygota: Diosophila.

```
This sequence encodes a protein capable of binding to active-type-R-Ras protein. The protein has a molecular weight of 98 kD by SDS-PAGE, and is designated p98. The protein coding sequence can be inserted into a suitable vector to treat cartain tumours or diseases (various cancers) in which active R-Ras protein in involved. Because active R-Ras protein is involved in formation and inhibition of tumours and related to diseases in which cellular Ca ions or phospholipids are involved, the screening method can be used for screening e.g. a tumour forming promoter or tumour forming inhibitor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1457

The present invention describes a library of human polynucleotides

comprising the sequences given in 21233 to 21779. Also described is a
method of detecting differentially expressed genes correlated with the
cancerous state of a mammalian cell, comprising detecting at least one
differentially expressed gene product in a test sample from a cell
differentially expressed gene product is encoded by one
of the 5248 polynucleotide sequences given in 212532 to 21779. The
polynucleotides can be used as a source of primers and probes, which can
be used for a variety of purpose, e.g. detection of expression levels,
mapping, tissue typing or profiling, forensics, genetic analysis and
detection of polymorphisms. Polypeptides encoded by the polynucleotides
can be used for raising antibodies for experimental, diagnostic and
therapeutic purposes. The polynucleotides may also be used to construct
arrays for diagnostics (which may be used to determine function of an
encoded protein); and to detect differences in expression levels between
two cells (e.g. to identify abnormal or diseased tissue in a human, to
identify a genetic predisposition or susceptibility to a disease such as
cancer). The polynucleotides of the invention are especially used in the
diagnostic and management of colocetal cancer, breast cancer,
diagnostic and management of colocetal cancer,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        3535 etgetegaegeteagagaggeagetteeeceettgggteeaacaaaeeeegegtgtgtgaege 3594

```
(http://www.jax.org/resources/documents/dnares/). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polymucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarcse gel electrophoresis. Vector DNA was prepared from a derivative of pWD42 (gil473214) pplART29072.1), a copy number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent E. coli XL10'Gold (Stratagene) cells and selected for amplicibli resistance."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
